                                                                                                                                                  DNA Res. 8:11.22(2001).

- FUNCTION: Involved in the efflux of sugars. The physiological rolar refunction of the intracellular concentration of toxic may be the reduction of the intracellular concentration of toxic sugars or sugar metabolites. Transports L-arabinose and to a lesser extent IPTG. Seems to contribute to the control of the arabinose regulon (By similarity).

- SUBCELLULAR LOCATION: Integral membrane protein. Inner membrane

Am. J. Physiol. 268:F1038-F1045(1995)

I- PUNCTION: Important for the resorption of phosphate by to the many be involved in actively transporting phosphate into Na(+) cotransport in the renal brush border membrane.

SUBCELLULAR LOCATION: Integral membrane protein.

ITSSUE SPECIFICITY: Kidney.
